

PAS were awarded the contract to supply and install a site wide public address, induction loop and class change system for Falinge High School in Oldham.

Approximately 70% of the school was completely rebuilt, with existing buildings being remodelled and refurbished. The development saw the construction of a new three-storey building on the site, linked to the existing sports hall, gym and dining accommodation.

Partnering with one of the region's busiest electrical contractors, A+B, we supplied a discrete and effective communication system throughout the buildings to classrooms, circulation areas, halls and external areas, while remaining linked to the pre-existing elements of the original site.

Systems:
Public Address
Induction Loop Class
Change System
